Walid:

What exactly do you need me to do or are you going to send someone out that can make that determination. We had planned to discharge into the lift station that is on the CES facility and allow it to overflow into the sanitary from there. Is that no going to work?

Thanks

Gary,

I need to get you help in identifying a working manhole to discharge into. I am working on it.

Thank You

Hello All:

I contacted Michael Hernandez about the flow meter I purchased for the discharge into the sanitary sewer. The meter is made by Great Plains Industries, Inc. 20 - 200 GPM Stainless Steel Turbine Flowmeter with LCD readout.

I will be meeting with Michael Hernandez in the morning so that he can insure that the meter will provide an accurate measurement of flow. There is a calibration report that came with the unit.

I would like to begin discharging to the sanitary sewer next week so if there is any remaining items that we need to discuss, please contact me so we can move forward with this operation.

Thanks

Gary Moore

Hello All

I am in the process of procuring a flow meter. It is virtually impossible to find one to rent at a reasonable price so I will be purchasing when I get approval. Please let me know who I need to talk with about city confirmation on calibration so I can get the meter to you. Also, let me know what else we need to discuss.

Thanks

Gary Moore
